Art Unit: 1764

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to a catalyst, classified in class 502, subclass 150+.
- II. Claims 12-21, drawn to a dehydrogenation of various organic compounds such as non-hydrocarbon compounds having functional groups such as –OH, -COOH, -NH₂, ethers, tetrafuran (sulfur compounds) classified in various classes and subclasses such as 554/31, 558/383, 560/214, 568/740, 585/444 (claim 14), 585/661 (claim 15), 585/379 (claim 16), 585/430 (claim 17).
- III. Claims 22 and 23, drawn to a dehydrogenation process with the use of a scavenger molecule for separating hydrogen, classified in various classes and subclasses similarly as in group II.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II/III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, the product as claimed can be used in a materially different process of using that product such as isomerization of hydrocarbons.

The inventions II and III are distinct, each from the other because of the following reasons:

As for Group II, the "scavenger molecule" specifically called for in the claims of Group III are not required by any one of Groups II. Conversely, Group III does not require the

Art Unit: 1764

essential feature of Groups II (the separation of hydrogen from the dehydrogenated compound within the reaction zone).

In other words, the essential feature of group II (III) is not required by group III (II) (see above).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

According to the specification (page 5), claims 12 and 22 are generic to the following disclosed patentably distinct species: non-hydrocarbons have functional groups such as ether, compounds having -OH, -COOH, and -NH₂. The species are independent or distinct because these compounds have different functional groups which is expected to have different chemical properties toward dehydrogenation.

Further, this application contains claims directed to the following patentably distinct species: dehydrogenation of (1) dehydrogenation of ethylbenzene to styrene, (2)

Art Unit: 1764

dehydrogenation of alkane to alkenes (3) dehydrogenation of cycloalkane to cycloalkene (4) dehydrogenation of methylcyclohexane to toluene (aromatic compound). The species are independent or distinct because these process produces different products by using different reactants.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1 or 22 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Art Unit: 1764

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thuan D. Dang whose telephone number is 571-272-1445. The examiner can normally be reached on Mon-Thu.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Caldarola can be reached on 571-272-1444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
